

# G53IDS

## Demonstration of Project

Data Collection and Analysis of the Linkage  
between **Mental Workload** and Spontaneous  
**Facial Expression** on Pattern Recognition Task

**Zequn Yu**

# Original Idea - I

Data Collection and Analysis of the Linkage between Mental Workload and Spontaneous Facial Expression on Pattern Recognition Task

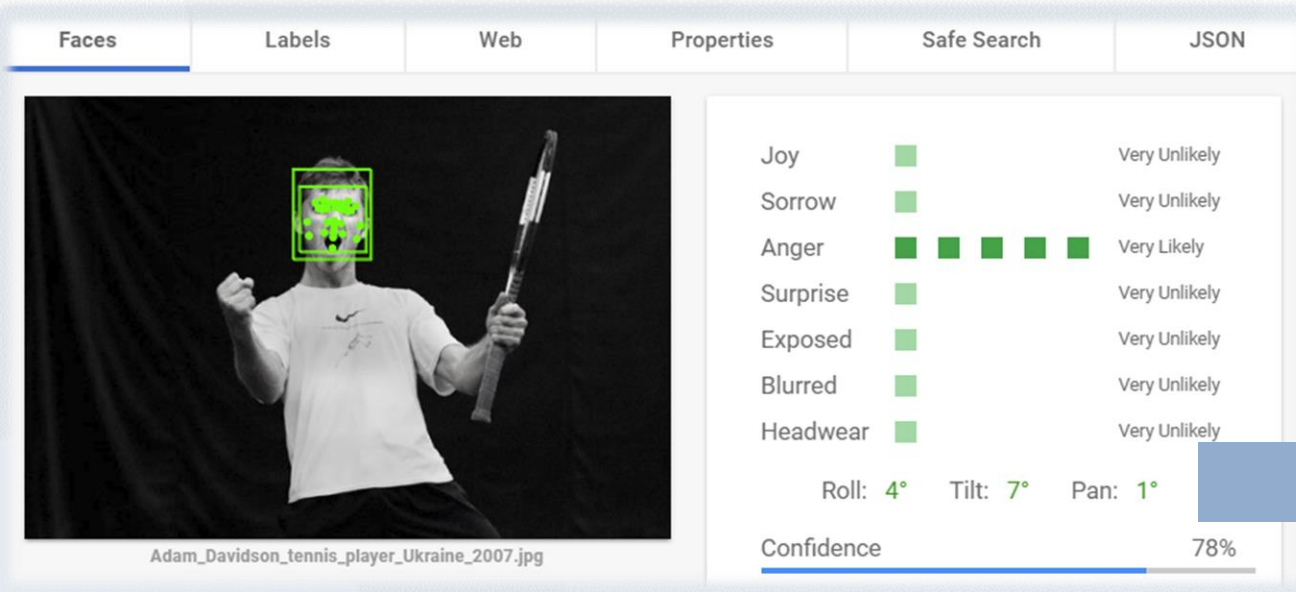

# Face Expression = Mental State ?

Data Collection and Analysis of the Linkage between Mental Workload and Spontaneous Facial Expression on Pattern Recognition Task

Joy

Anger

## Original Idea - II

Data Collection and Analysis of the Linkage between Mental Workload and Spontaneous Facial Expression on Pattern Recognition Task

# Workload

Limit Capacity of the Brain

# fNIRS

Best Physiological Measure

Thinking/Concentration Level

Introducing Other Measures

# Project Outline

Data Collection and Analysis of the Linkage between Mental Workload and Spontaneous Facial Expression on Pattern Recognition Task

Face

Workload

01

Data  
Collection

- Task and Software
- Experimental Protocol
- The Dataset

02

Workload  
Evaluation

- Traditional Measurement
- Time Limit Comparison
- fNIRS Measurement

03

Facial Data  
Analysis

- OpenFace
- Ratio Measure
- Subject Count
- Blink Rate

# PART 1

## **Data Collection**

*Task and Software | Experimental Protocol | The Dataset*

# Data Collection: Task and Software

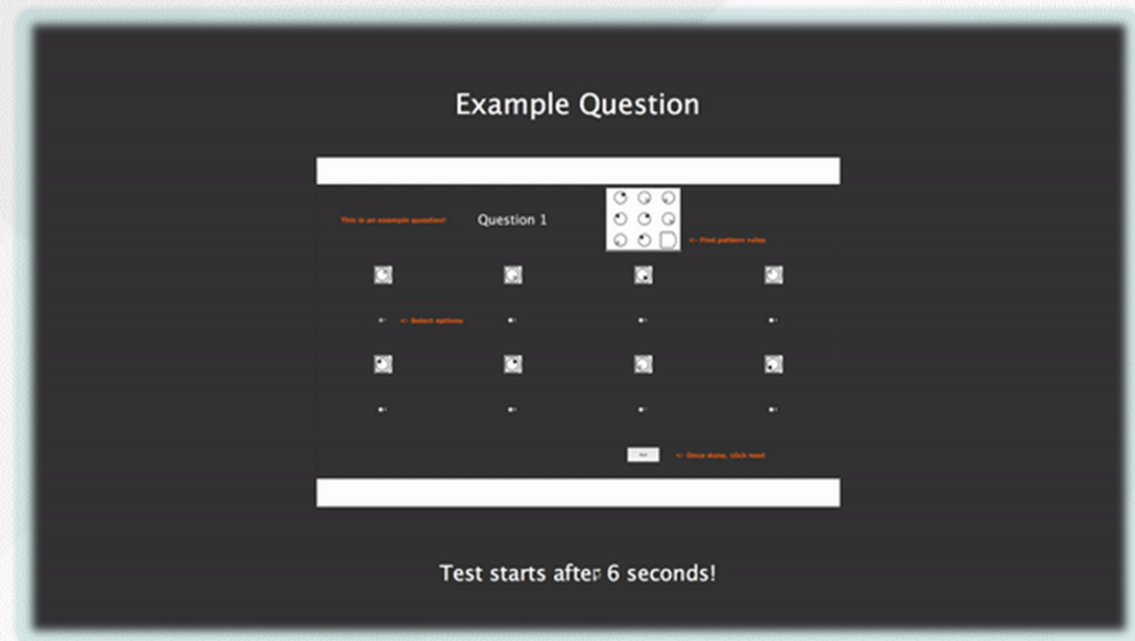

Data Collection and Analysis of the Linkage between Mental Workload and Spontaneous Facial Expression on Pattern Recognition Task

## Pattern Recognition Task

- 3 independent evaluators
- 20 selected questions out of 40
- 4 grouped question sets

## PR Software

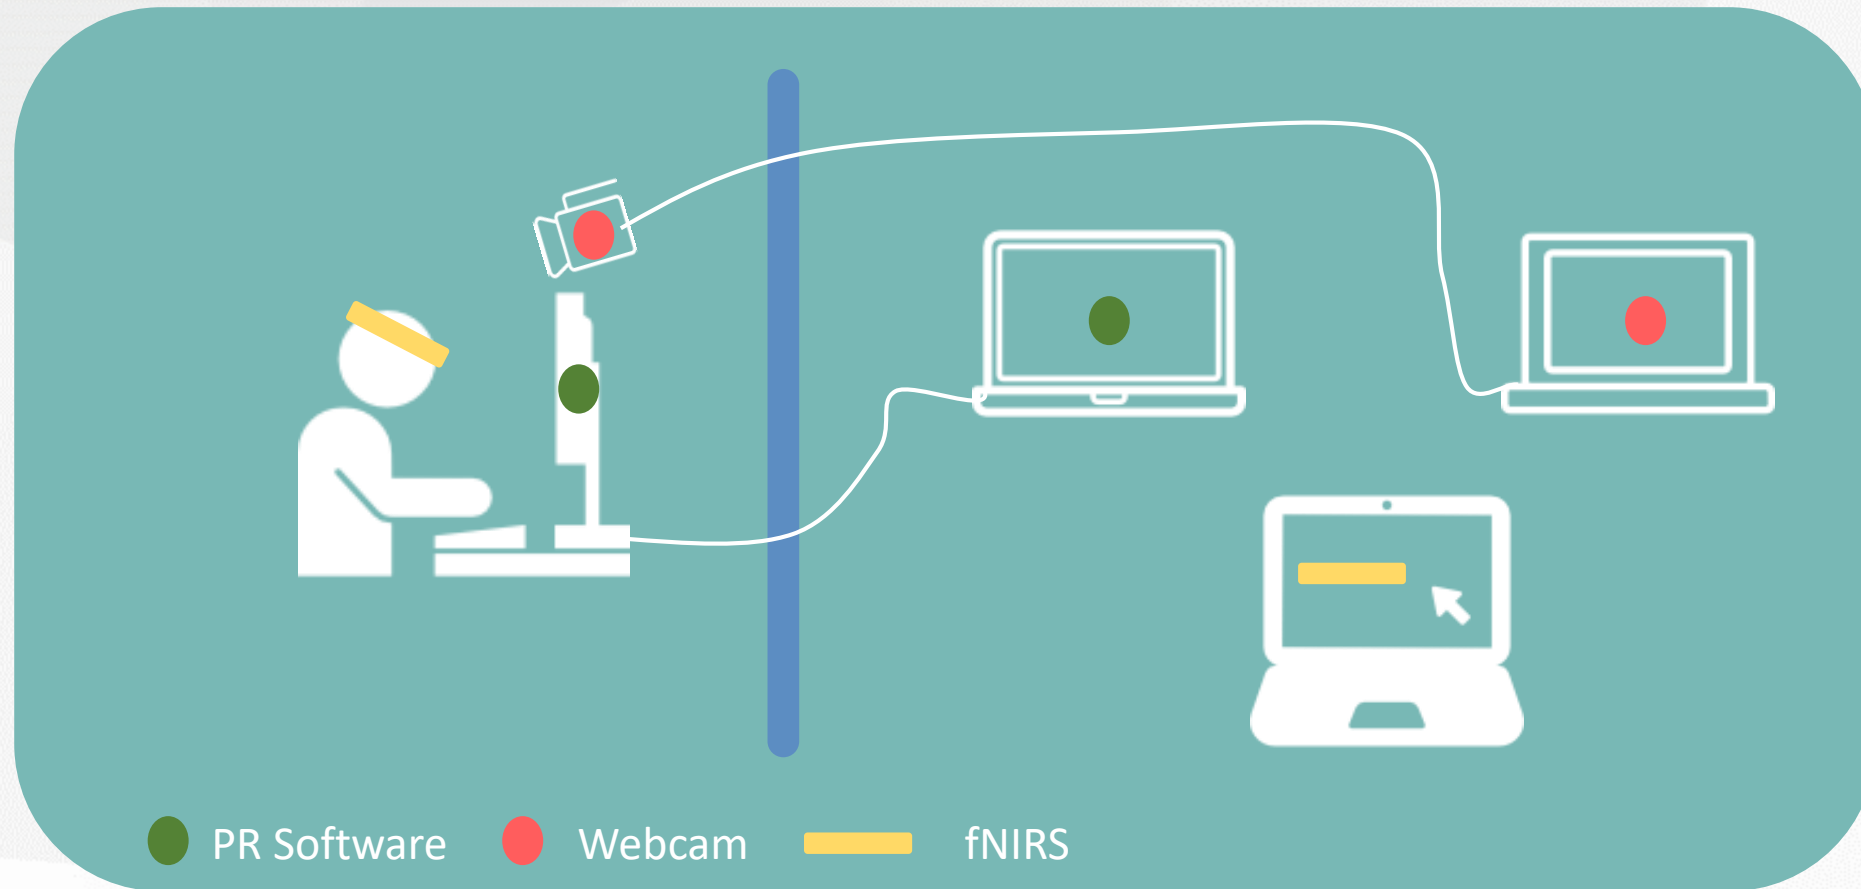

- written in Python and PyQt5
- collect answer/ISA rating/time

# Data Collection: Experimental Protocol – Devices

Data Collection and Analysis of the Linkage between Mental Workload and Spontaneous Facial Expression on Pattern Recognition Task

# Data Collection: Experimental Protocol – Two Problems (I)

Data Collection and Analysis of the Linkage between Mental Workload and Spontaneous Facial Expression on Pattern Recognition Task

## fNIRS Physiological Delay

- vary on individuals
- peak  $\neq$  real peak

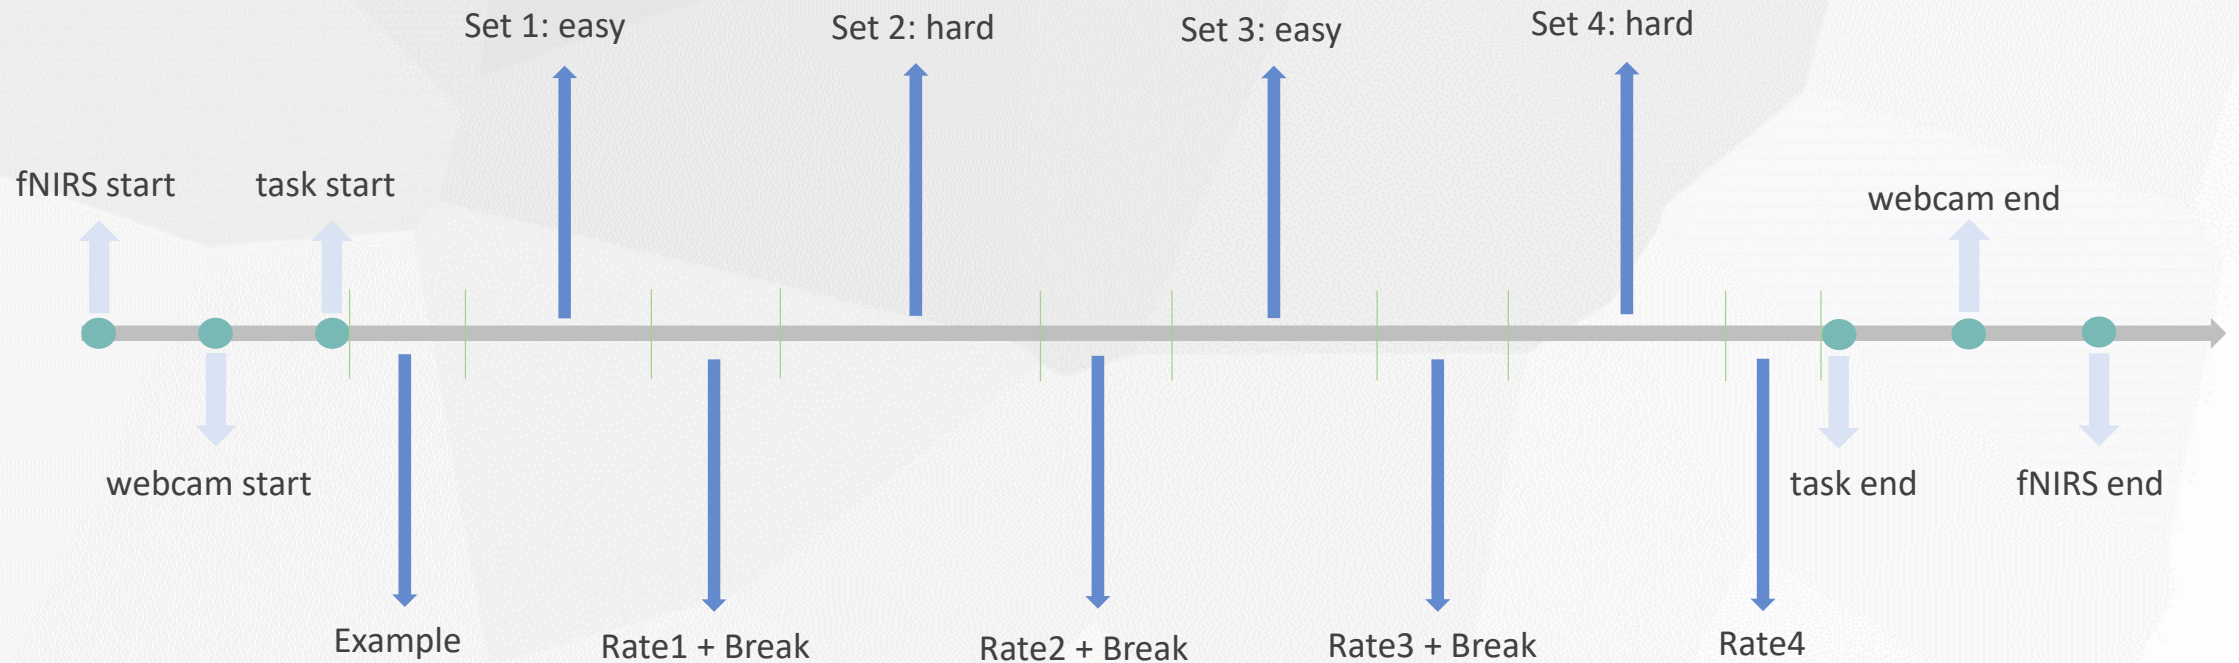

**Solution: analyse period**

# Data Collection: Experimental Protocol – Timeline

Data Collection and Analysis of the Linkage between Mental Workload and Spontaneous Facial Expression on Pattern Recognition Task

## Data Collection: Experimental Protocol – Two Problems (II)

Data Collection and Analysis of the Linkage between Mental Workload and Spontaneous Facial Expression on Pattern Recognition Task

### fNIRS Covers Forehead

- hide facial landmarks
- hide some AUs

**Solution: separate dataset**

# Data Collection: Experimental Protocol – Study Protocol

Data Collection and Analysis of the Linkage between Mental Workload and Spontaneous Facial Expression on Pattern Recognition Task

## Two Steps Analysis

- **Verify** distinct levels of mental workload
- **Compare** facial expression under the levels

## Study Conditions

- **Step1:** fNIRS + 40s/q, fNIRS + no limit
- **Step2:** full face + 40s/q, full face + no limit

# Data Collection: The Dataset – Raw Data

Data Collection and Analysis of the Linkage between Mental Workload and Spontaneous Facial Expression on Pattern Recognition Task

## Raw Data

20

Participants

with the  
average age 21.95

4

Study Conditions

with fNIRS recording?  
with time limit?

20

Questions

in pattern recognition  
questionnaire, alone  
with the ISA rating

4

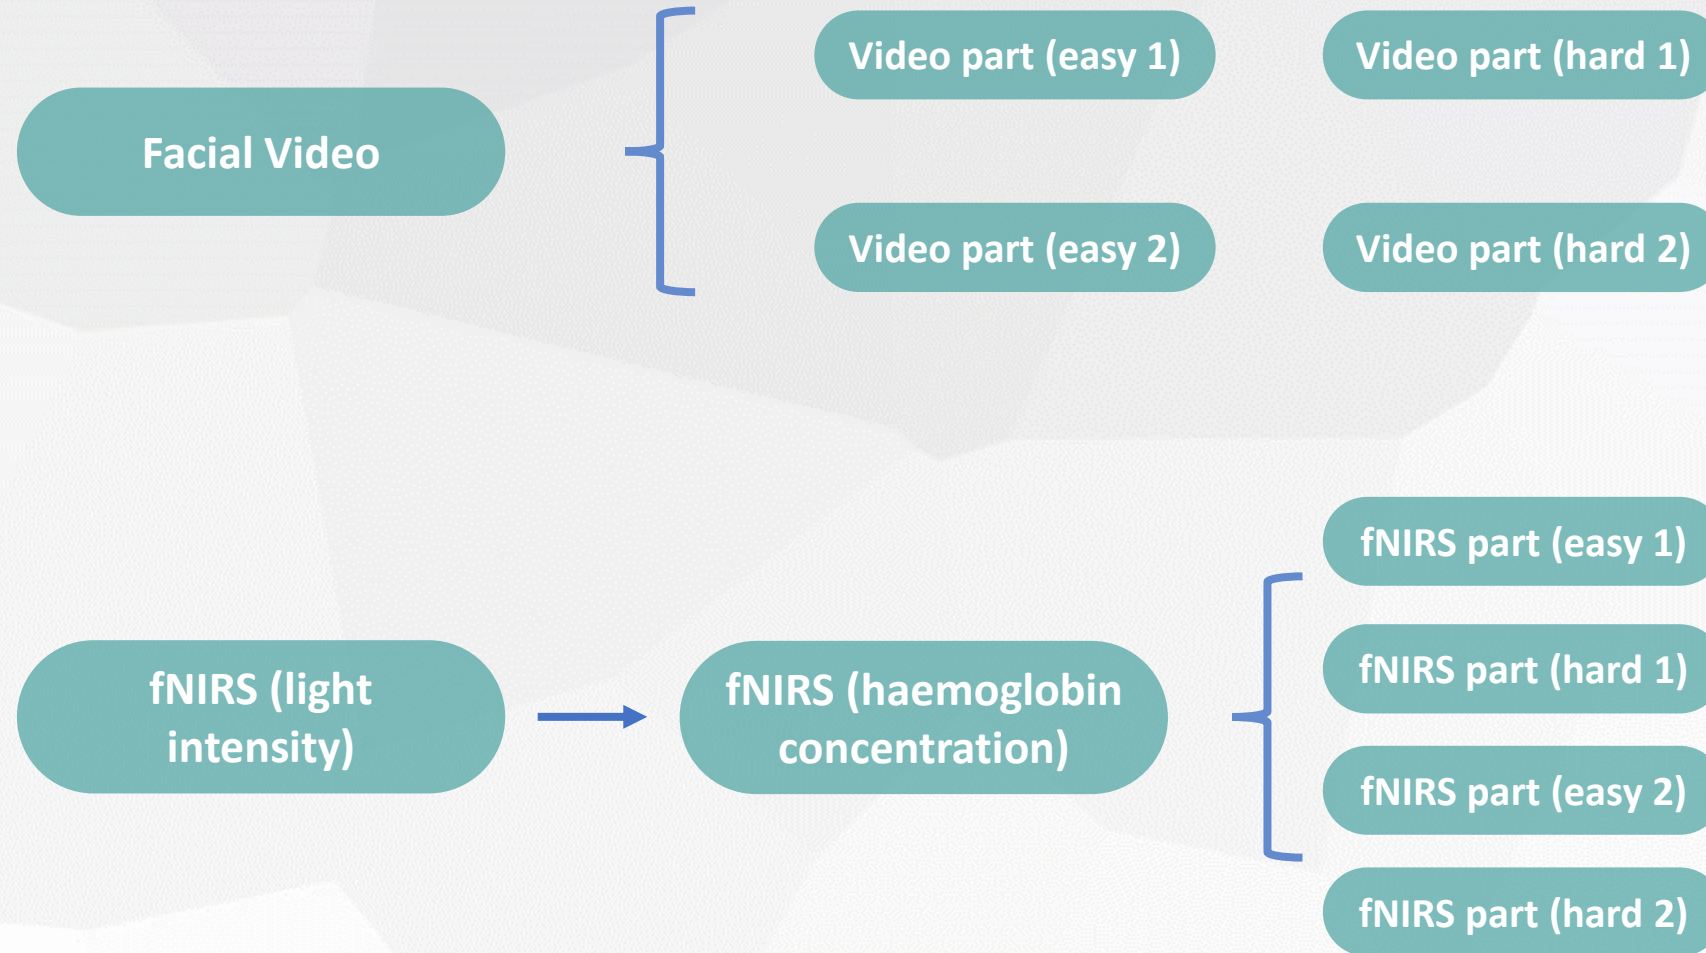

Time Periods

2 in easy, 2 in hard  
question sets

# Data Collection: The Dataset – Data Pre-processing

Data Collection and Analysis of the Linkage between Mental Workload and Spontaneous Facial Expression on Pattern Recognition Task

# PART 2

## **Workload Evaluation**

*Traditional Measurement | Time Limit Comparison | fNIRS Measurement*

## Workload Evaluation: Traditional Measurement

Data Collection and Analysis of the Linkage between Mental Workload and Spontaneous Facial Expression on Pattern Recognition Task

Question Set	Difficulty(1-5)	Subjective(1-5)	Primary(%)	Secondary(s)
e1	1.60	1.25	97	72.40
h1	3.27	3.35	60	173.42
e2	1.73	1.60	89	87.13
h2	3.20	3.50	59	195.93

Traditional measures result table

# Workload Evaluation: Time Limit Comparison

Data Collection and Analysis of the Linkage between Mental Workload and Spontaneous Facial Expression on Pattern Recognition Task

## Result on Time Limit Conditions

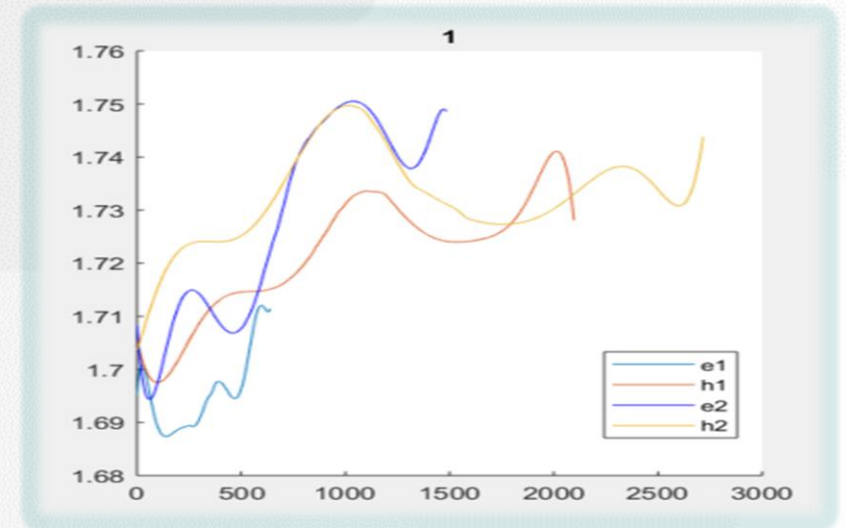

# Workload Evaluation: fNIRS Measurement – Noise Removal

Data Collection and Analysis of the Linkage between Mental Workload and Spontaneous Facial Expression on Pattern Recognition Task

low-pass + Savitzky Golay filter

# Workload Evaluation: fNIRS Measurement – Feature Extraction

Data Collection and Analysis of the Linkage between Mental Workload and Spontaneous Facial Expression on Pattern Recognition Task

- Feature =  $\text{HbO2} - \text{mean}(\text{HbO2}_{\text{baseline}})$
- Attribute = mean

For each subject:

- 4 time periods and 8 channels
- binary classification labels

points :  $[4 \times 8_{\text{double}}]$   
labels :  $[4 \times 1_{\text{binary}}]$

# Workload Evaluation: fNIRS Measurement – Classification

Data Collection and Analysis of the Linkage between Mental Workload and Spontaneous Facial Expression on Pattern Recognition Task

SVM (polynomial)

f1 score: 73.3%

# PART 3

## **Facial Data Analysis**

*OpenFace | Ratio Measure | Subject Count | Blink Rate*

# Facial Data Analysis: OpenFace

Data Collection and Analysis of the Linkage between Mental Workload and Spontaneous Facial Expression on Pattern Recognition Task

OpenFace<sup>[3]</sup>

The state-of-art facial analysis toolkit

# Facial Data Analysis: Ratio Measure

Data Collection and Analysis of the Linkage between Mental Workload and Spontaneous Facial Expression on Pattern Recognition Task

$$ratio = \frac{\sum_{n=1}^S Re_n}{\sum_{n=1}^S Rh_n}$$

distinction line

- 0.3 | + 0.3

AU	01	02	04	05	06	07	09	10
ratio	0.8489	0.8105	0.8840	1.2390	1.0512	0.9019	0.7784	1.1215
AU	12	14	15	17	20	23	25	26
